Flush-Mount Temperature Sensor Specifications:

This Flush Mount temperature sensor can be screwed directly into the drywall and painted over to become almost invisible to the occupant. The 1-wire sensor element used is a DS18B20 with 12-bit resolution.

Multiple sensors can be daisy chained on a single CAT5 network that can extend up to 200 meters or more in a typical environment. The sensors can receive data and power over the same CAT5 cable, which saves time and money during install.

Accuracy:

+/- 0.5C

Range:

-10C to 85C

Dimensions:

Face of the sensor is 0.75"

Cable is approximately 4" long
